

DSM COMPUTING SOLUTIONS INC.

We Take Care Of Your IT ... You Take Care Of Your Business

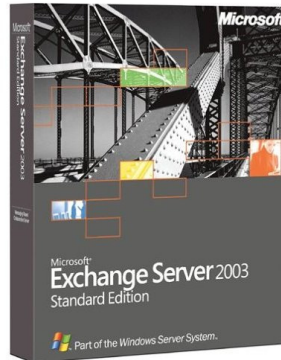

Hosted Microsoft Exchange

Get Corporate Power For Your Business

WHEN SMALL
BUSINESSES NEED TO RUN
LIKE BIG BUSINESSES...

THEY CHOOSE DSM

- Microsoft Exchange is a powerful and flexible system for complete company communications.
- Exchange is the industry standard for email and other centralized company information.
- The costs to purchase Exchange are not only very high, but only the beginning of the costs involved.
- Exchange requires ongoing maintenance and support by higher level experienced and trained technicians that specialize in this system.
- Yearly costs are also required for software updates and other important system maintenance.

Why Should You Be Without It...

Microsoft Exchange is a valuable addition to your business for Email and other information organization.

You don't need to spend the high costs to purchase and maintain Exchange for your company with the DSM Hosted Exchange solution. Our totally secure and managed system provides this high level solution without the high costs.

We share the infrastructure costs among a large number of our clients and users, which makes the Exchange solution both highly affordable and trouble free.

There is no system management, support or maintenance for you to contend with.

Hosted Exchange Features

With Hosted Microsoft Exchange, there is no difference to the functionality of the system than if you installed an Exchange Server in your office.

Enterprise-Class Messaging

Integrate E-Mail, Calendaring, Contact and Task Management in one collaborative and secure workplace, available on-line and off-line. Coupled with Outlook, today's leading information management program, Exchange will provide you with this powerful online and offline system. Organize incoming e-mail into folders or flag e-mail from important clients, the usefulness is endless.

Anytime, anywhere access to email from any Internet browser

Outlook Web Access provides you with access to e-mail, personal calendars, group scheduling and contacts from a Web browser wherever you are. Using Outlook Web Access is very similar to your desktop Outlook and you can perform mostly all the same tasks as you would on your desktop. Best is, whatever you do over the Web gets changed in the central Exchange system and those changes are in your desktop Outlook automatically.

Public Folders to securely store data and share information

You can create public folders to distribute information across your organization. Public folders can store messages and provide a general share point for all your users or personal storage location. Create team folders where you can set up workspaces for teams to share project-related messages, files, schedules, tasks, and applications. Then you can set rules so that only team members can gain access to that folder information.

Collaborative scheduling to share calendars within your organization

Manage a calendar throughout the entire organization. Invite colleagues to meeting, check availability, reserve a conference room and more. You can share daily schedules to easily plan meetings or delegate schedules to administrative assistants to keep you up-to-date.

Task Management

Create tasks and to-do lists, assign tasks to others and notify them through e-mail. Check completion status and check tasks off when you're done or delegate and assign tasks through e-mail. Tasks can be assigned and prioritized for all users for further management and control.

Centralized Contacts

Track and organize all your business and personal contacts in one connected complete system. Share all customer information, such as e-mail, documents, and meeting notes in a public folder. Control over private and shared contacts to work the way you need. Instantly update any contact information for the entire team. When you enter a name, the Directory Lookup can automatically fill in the email address or other information

Synchronization to your PDA

Get complete synchronization of your contacts, tasks, emails and calendar to your hand held device automatically and easily. Now you can really take your vital company information with you when your on the go. Synchronization is two way allowing you to change and add data on your PDA and it will update in your desktop Outlook, your Web Outlook and any other computers you have setup for your Outlook use.

Significant Features & Functions

- Searching capabilities to find emails & files
- Offline capabilities to work when disconnected
- Personal Control panel for your information
- Unified messaging and work teams
- Personal & public information stores
- Synchronization from Web or Desktop
- Full history information at your fingertips
- Save time and space with single email distribution

Compare The Costs

DSM Exchange Hosting is a cost effective solution for your business

The cost of DSM Hosted Exchange is a fraction of the real cost of implementing and managing your own Exchange server.

Lets not forget the technical service and management that is required for the system.

Your IT personnel need specialized skills to properly manage and maintain the Microsoft Exchange environment.

There is a need for consistent patch management of the system as there are new fixes released all the time.

Security becomes an even bigger concern since your Exchange server becomes a very attractive target for virus, intrusion and other nasty programs and hackers to attack.

So, let DSM provide your company with a fully managed, controlled, secured and reliable Microsoft Exchange system for a fraction of the cost and management of installing your own dedicated Exchange server system.
