

DSM COMPUTING SOLUTIONS INC.

We Take Care Of Your IT ... You Take Care Of Your Business

DSM Virtual Office

Secure Remote Access

WHEN SMALL
BUSINESSES NEED TO RUN LIKE
BIG BUSINESSES...

THEY CHOOSE DSM

- Working remotely is a reality with today's computing requirements
- The Internet has provided your business with amazing advantages but it comes with great security risks.
- Computing security has advanced and many businesses are locking down and securing their systems, especially existing DSM clients.
- The "bad guys" are always looking for new ways to get into your business and cause damage or steal your valuable information.
- These innovative intruders and thieves have discovered the latest "open door" to your business... Your treasured remote access.
- When you work remotely and connect to your office for email, remote desktop access or even through your "secure: VPN, you are at risk of these latest security threats.

If You Use Remote Access - You Need The DSM Virtual Office A New Level Of "Lock Down"

The big corporations are onto this latest security threat and are locking their systems down.

Why shouldn't you do the same for your business?

These corporations are spending hundreds of thousands of dollars to secure their remote access users, but they can afford it!

Currently available secure remote access technology for your business can cost as much as \$20,000.00 to purchase and approximately \$4,000.00 per year to maintain.

DSM provides you with a complete solution for secure remote access as good or better than the large corporate systems at a fraction of their yearly maintenance costs.

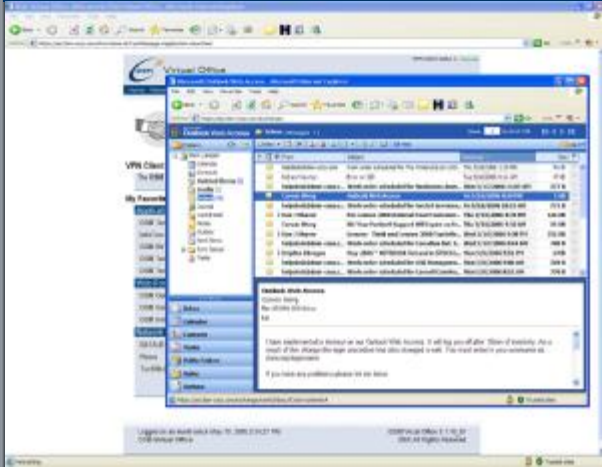

IT'S TIME TO PROTECT THIS PART OF YOUR SYSTEM

DSM Virtual Office - Why Do I need This?

Secure & Beyond

- The DSM Virtual Office uses the same security system that the banks and government use, which is based on 128 Bit SSL Encryption.
- This technology is so secure, it has never been hacked or broken into.
- Our Virtual Office system and all the remote connections are in your office. You are not inadvertently exposing your system to other people or companies in order to gain remote access to your system.
- The system is monitored by DSM so you are even more protected from potential security breaches.
- Ensure that ONLY authorized users remotely access your system under your control.

Don't take any risks.... If you access your system remotely, you need proper protection. There are daily occurrences of intrusions, data theft, viruses and other nasty things through users remote access connections.

Access The System From Anywhere

Our system eliminates all the complication of connecting to your office. From any Internet connected computer in the world, you can get into your system, with complete SECURITY and safety.

If You Can Use A Web Browser....

Our system works from your familiar web browser, so it is fast, easy and familiar on any computer, anywhere, anytime.

One Click To What You Need

The design of the system is based on a single click to get at what you need, your Microsoft Outlook, your data files, your desktop, your Terminal Server system and dedicated applications.

Login The Same As At Your Office

Your user name and password is unified with your office, so no new or different login procedures are required, it is exactly the same as your office.... Easy and Fast!

Work On Your Data Files

The amazing technology in our system allows you to work on your data files locally on your remote computer and then save your files back on your office system, all with complete SECURITY.

Work Remotely Like You Do In Your Office

Whether you run multiple applications, edit and view many files at the same time, access specific programs, whatever you do in your office, you can do anywhere in the world from any computer, as long as it is on the Internet.

Eliminate Frustrating Access Setup

We have all been there, traveling for business or on holiday and you just want to connect to your office, check some emails and do a few fast things. The frustration of needing the long web URL to get your email. Or the computer you are using needs you to find and load some weird connection programs, but... This computer is restricted and you can't do it anyway....

All this is eliminated with the DSM Virtual Office.
